The battle for control of the

skies continues. As the amount of unmanned aerial vehicles (UAVs) drones increases

each year, many people are stepping up their efforts to keep the devices out of the

air. Times Starlight Technology, a traditional RF Signal jammer manufacturer in

Shenzhen, has now developed various of new products, dubbed the Drone Jamming

Device, that attacks UAVs with radio waves. The Drone Jamming Device stated to

use “radio control frequency disruption technologies to safely stop drones in the air,

before they can pose a threat to military or civilian safety.” It operates on standard

GPS, 2.4G, 5.8G and ISM radio bands, allowing for it to interference with both

commercial and special UAV drone signals. The Drone Jamming Device can hit

objects from 100 to 5000 meters with an effective angle from 30° to 360°. A Drone

Jamming Device can be done from the smallest handheld portable jammer to the biggest Prison Jammer and VIP vehicle Mounted Jammer by different requirements. When a remote control signal is interfered, drones will often enter into their safety protocols, which usually includes one of three options. It will either hover in place until the pilot can regain a control link, attempt to land so the pilot can recover it physically, or try to return to its point of origin. Since the Drone Jamming Device is mentioned to be attacking the GPS signal as well (for optional, adjustable and can be turned off independently), the scenario is that the device will hover for a while or try to land.
